BTP Consultants hires new expert.

Batiactu · source

BTP Consultants has strengthened its team with the appointment of a new expert in technical control. This move reflects the company's commitment to enhancing service offerings in the construction sector. The article emphasizes the importance of professional expertise in meeting industry demands.

New joint showroom opens.

Batiactu · source

Cedeo and Point.P have inaugurated a shared showroom in Alençon, enhancing product visibility for interior and exterior fittings, as well as sanitary equipment. This collaboration aims to streamline customer experiences by showcasing a comprehensive range of offerings in a unified space. The initiative reflects a strategic move to improve service delivery in the construction sector.

Uruguay reaches water milestone.

Batiactu · source

NGE has achieved significant progress in Uruguay with the acquisition of Saceem, marking its largest international acquisition. This strategic move enhances NGE's capabilities in the water sector. The deal underscores the company’s ongoing growth and expansion efforts in South America.

New sales executive appointed.

Batiactu · source

Andreas Schneider has been appointed as the new Executive Vice President of Sales & Service at Still, replacing Florian Heydenreich. His role will focus on enhancing the company's market presence following Heydenreich's departure after 11 years. This leadership change is expected to drive new initiatives and strategies for the company's growth.

Meet your social obligations.

Batiactu · source

Construction industry leaders often overlook the impact of retirement benefits on their treasury. Two solutions exist to cover these obligations: setting up a provision or subscribing to a dedicated insurance contract. The insurance option allows for managing costs over the long term and improves the

company's valuation.

Women face construction stereotypes.

Batiactu · source

Women in the construction industry continue to face significant stereotypes despite a slight increase in their representation, currently at only 12% of the workforce. A mere 2% of these women occupy positions on construction sites, highlighting persistent inequalities. The discussion during the recent round table at the Gustave School underscored the need for further progress and change.

Spie signs Reutlingen contract.

Batiactu · source

Spie has secured an energy performance contract to significantly reduce energy consumption at the Reutlingen training center in Germany. This project involves upgrading multiple buildings facing energy obsolescence. The initiative focuses on enhancing energy efficiency and sustainability.

Candidates present housing proposals.

Batiactu · source

During the Rencontre des entrepreneurs de France on August 27, 2026, seven declared presidential candidates presented their economic programs. Topics included housing, albeit briefly discussed. This event highlighted the candidates' efforts to engage with the business community.

Icade redefines office use.

Batiactu · source

Icade has acquired 81.5% of Comet, strengthening its position in new uses of tertiary real estate. This move reflects Icade's commitment to adapting to evolving demands in the workspace market. The article discusses the implications of this acquisition for Icade's strategic direction.

Budget aids social landlords.

Batiactu · source

The article discusses the role of housing in the upcoming presidential campaign, highlighting concerns voiced by candidates about previous poor decisions impacting the housing sector. Gabriel Attal, one such candidate, emphasizes the need for better focus on housing issues during the election. This reflects a growing acknowledgment among politicians of the importance of housing in their agendas.

Shells added to cement.

Batiactu · source

Hoffmann Green Cement is innovating by developing a type of cement that incorporates waste from Saint-Jacques shells. This initiative highlights their commitment to sustainability and the circular economy in construction materials. The company aims to reduce environmental impact while maintaining performance standards.

Eiffage reports strong H1 2026.

Batiactu · source

Eiffage, a major player in the French construction industry, reported strong financial results for the first half of 2026 during a press conference. The CEO, Benoît de Ruffray, highlighted the success attributed to various factors impacting the company's performance. Overall, the company conveys a positive outlook amidst challenges.

Ursa may sell XPS business.

Batiactu · source

Adovi Adote has been appointed as the new general director of Ursa France, focusing on biosourced segments and off-site construction. Ursa, previously owned by Xella, was purchased by Etex in 2022, and its extruded polystyrene insulation activities across France, Spain, Italy, and Germany may be affected. The company is navigating significant changes in the construction materials sector.

Malerba moves to new headquarters.

Technicbaie · source

Malera has moved to its new headquarters in Thizy-les-Bourgs as of July 15, 2026, marking a significant organizational transition after 50 years in Cours-la-Ville. The 3,822 m² building, named 'Maison Malerba', emphasizes environmental sustainability and resource optimization. This investment of over 10 million euros highlights the company's commitment to digitalization, cohesion, and responsible practices in the construction sector.

ES-SO proposes cooling scale.

Technicbaie · source

The ES-SO encourages the EU to adopt a "Cooling Scale" to improve the thermal comfort of buildings by integrating passive and active solutions. This approach aims to reduce the risk of overheating while aligning with the energy performance directive. The scale allows for structuring the necessary measures to create energy-efficient and resilient buildings.

FFB denounces aid cuts.

Technicbaie · source

The FFB criticizes the government's decision to abolish the MaPrimeRénov' aid for insulation work, thus threatening affordable energy renovation for low-income households. This decision is deemed contrary to environmental objectives and puts artisans in difficulty. The FFB calls for a stable policy to support the ecological transition in building.

Serge Ferrari CSR charter.

Technicbaie · source

The Expert Serge Ferrari network has signed a CSR charter to improve their environmental and social impact. This initiative aims to harmonize responsible practices and promote sustainable innovation within its members. In the long term, the network plans to recover and valorize textile scraps, thus supporting a circular economy.

Malerba moves to new headquarters.

Technicbaie · source

Malerba has moved to its new headquarters, Maison Malerba, in Thizy-les-Bourgs on July 15, 2026, symbolizing a significant organizational transformation. The 3,822 m² building focuses on environmental sustainability and resource efficiency, featuring a circular economy approach. This investment of over 10 million euros aims to foster cohesion, digitalization, and responsibility within the workplace.

Lhermite joins Ehret sales.

Technicbaie · source

Yannick Lhermite has been appointed as the first Sales Manager for Habitat France at Ehret, in a new role aimed at boosting sales team support and operational effectiveness. With 16 years in the company, he will focus on recruiting new sales personnel and enhancing team skills by 2028. Key responsibilities include managing relationships with carpentry networks and overseeing the integration and training of new recruits.

Bourgoin named Atlantem CEO.

Technicbaie · source

François Bourgoin has been appointed as the new CEO of Atlantem, effective June 16. He brings extensive experience in global leadership and operational management from various industrial firms. His main goal will be to enhance organizational fluidity, improve customer experience, and support innovation.

Construction labor shortage rising.

Bauinfoconsult · source

In the construction industry, the shortage of skilled workers is an acute challenge affecting 96% of companies. Around 41% of companies report severe staff shortages that strongly impact project work. Innovative solutions such as digitalization and robotics could help mitigate the effects of demographic change.

Special fund helps little.

Bauinfoconsult · source

The construction materials industry is skeptical about the German investment special fund, despite the increase in the state deficit due to additional expenses. Only 18% of the surveyed manufacturers see it as an opportunity for investments in 2026, while 33% expect no positive effects. This reluctance may be due to slow reforms and realistic market conditions in the construction industry.

Shortages and inflation hinder growth.

Bauinfoconsult · source

The 2027 building trends are overshadowed by a shortage of skilled workers and rising construction costs, according to a survey among manufacturers in the industry. The influence of classic crisis themes is so dominant that innovative approaches such as sustainability and AI investments move into the background. These challenges could significantly shape the future development of the construction industry.

Construction social media grows professionally.

Bauinfoconsult · source

By 2026, already 95% of Germans aged 16 and above will be using social media, setting a new standard for the construction industry. A study shows that over 86% of construction professionals have a social media profile and its use is increasingly becoming professionalized. 38% actively pursue marketing goals through their social media presence.

Construction revenue expected to grow.

Bauinfoconsult · source

The German construction industry is optimistic despite challenging conditions, as the order situation in the first quarter of 2026 has increased. A survey of 400 construction professionals found that two-thirds of them expect sales increases. This positive mood is mainly observed among companies in new construction in western and southern Germany.

Just post on LinkedIn.

Bauinfoconsult · source

LinkedIn is not just for job searching; it has become a vital platform for the construction industry to establish trust and connections. Providers of building materials can leverage LinkedIn to showcase expertise and stay relevant to their target audience. Effective engagement and tailored content can significantly enhance visibility and reputation.

Digital communication surpasses traditional methods.

Bauinfoconsult · source

BauInfoConsult's recent study reveals a shift in communication preferences within the construction industry, with digital sources surpassing traditional media. For the first time, online research and social media are viewed as the most significant information channels. This trend reflects the industry's adaptation to digitalization, highlighting the need for targeted communication strategies.

Humans drive transformation success.

Bauinfoconsult · source

Transformation in the construction industry often fails due to poor communication rather than faulty strategies. Effective communication is essential for engaging employees and guiding them through change, positioning people as the key success factor. A successful transformation relies more on leadership's ability to foster dialogue and clarify goals than on the technologies employed.

EEG target met, expansion dropping.

Geb-info · source

Germany has achieved a significant milestone in solar energy by surpassing 128 GW of installed photovoltaic capacity as of August 2026, fulfilling the EEG target for the year. However, the BSW-Solar warns of potential slowdowns in future expansions unless investment conditions improve. The organization emphasizes that to meet ambitious goals of 215 GW by 2030, a higher annual installation rate is necessary.

Tangerhütte is energy municipality.

Geb-info · source

Tangerhütte has been recognized as the Energy Community of the Month for August 2026, highlighting its commitment to renewable energy sources such as wind, solar, and biomass. The town, with a population of about 10,000, has already generated around 261 MW of electricity from renewable sources, with significant future expansions planned. Local citizen engagement is pivotal, as seen with

community projects like the solar park in Uchtdorf and the development of a bioenergy village.

New customer gas prices rise.

Haustec · source

Gas prices for new customers have reached a new record high, with a rise of around 23 percent since February 2026. Recommended tariffs cost an average of 11.56 cents per kilowatt hour, which can allow consumers to make significant savings by switching. However, experts warn of uncertain future price developments due to geopolitical tensions.

Evonik appoints interim CEO.

Kunststoffweb · source

Dr. Claus Rettig has been appointed as the interim CEO of Evonik, stepping in for Christian Kullmann who is recovering from surgery. Rettig has a long tenure at Evonik and will continue to oversee the company's Asia operations. The duration of his interim role remains uncertain.

Fysol acquires Besler Glassfiber.

Kunststoffweb · source

Fysol has acquired Turkish competitor Besler Glassfiber, boosting its position in the European market. This acquisition surpasses Johns Manville, placing Fysol behind market leader Praana. CEO Marc Hubert sees significant potential for future expansion from Besler.

Gurit expects more dynamics.

Kunststoffweb · source

Gurit, a composites specialist based in Switzerland, has raised its revenue forecast for 2026 following improved results in the first half of the year. The company expects a revenue increase of 9 to 11 percent, reflecting a stronger momentum in the second half. Despite a 6.6 percent decline in revenue compared to the previous year, adjusted figures show a positive growth of 9.1 percent.

Evertis expands in Mexico.

Kunststoffweb · source

Evertis has established a co-extrusion line for multi-layer PET cast films in Pesquería, Mexico, aimed at producing ultra-thin films. The facility, set to be completed in August 2026, responds to rising demand for high-performance films with reduced material usage. CEO Manuel José Matos Gil emphasizes the significance of Mexico in their North American operations.

India's first epoxy plant 2028.

Kunststoffweb · source

Epigral, initially a fertilizer producer, plans to invest 54 million euros in establishing India's first epoxy resin production facility in Gujarat. By 2026, they aim to start a pilot plant, with full-scale production by spring 2028, responding to anticipated double-digit demand growth for epoxy resins. The company also seeks to transition to a specialty chemicals producer while expanding its PVC production.

Savant adds Sol-Lux partner.

Coastal style comes home.

Wf-vision · source

TWOPAGES has partnered with designer Amy Courtney to launch a textile collection inspired by coastal living. The collection includes five designs with natural motifs, crafted in linen. It is designed for home use with a relaxed aesthetic.

Roll-up mosquito nets.

Interempresas · source

The article discusses the benefits of registering on the Interempresas platform. It highlights various resources available for businesses and professionals in the industrial sector. By signing up, users can access valuable networking opportunities and promotional tools.

Ibernova software optimizes production.

Interempresas · source

TGM – Toldos Gómez enhances production efficiency and cost control through a collaborative software solution with Ibernova and Inforhouse. This integration facilitates real-time visibility and data-driven decision making, significantly transforming operational workflows. The modernization allows precise

project cost analysis, supporting their customized business model.

STAC invests 20 million euros.

Interempresas · source

STAC has committed over 20 million euros to expand its facilities in Padrón, enhancing industrial capacity and logistics. This investment follows a previous 25 million euro investment in 2022, reinforcing STAC's growth strategy in Galicia. The expansion aims to improve efficiency and support international expansion efforts.

Concrete defines your developments.

Batiactu · source

Heidelberg Materials offers decorative concrete solutions that enhance spaces while ensuring durability. Their unique offerings allow for tailored designs suitable for various environments, emphasizing aesthetics and functionality. With a commitment to sustainability, these solutions reduce environmental impact and improve urban living conditions.

Gas prices will rise.

Batiactu · source

Gas prices are expected to increase significantly by September 2026, following prior hikes in July 2026. This trend may impact consumers and the broader energy market. The article provides insights into the reasons behind these price surges.

Hackers attack housing website.

Batiactu · source

The Ministry of Housing's 'Zero Vacant Housing' website has been inaccessible since August 30, 2026, due to a cyberattack by hackers called ZeroBytes. The attack reportedly compromised nearly 149 million records, notably affecting landlords and users. As of now, the ministry has not publicly confirmed the cyber incident.

New customer gas prices rise.

Geb-info · source

Gas prices for new customers have reached a record high, with the average recommended tariff now at 11.56 cents per kilowatt-hour, an increase of approximately 23% since February 2026. The surge is attributed to conflicts in the Middle East impacting European gas markets, despite Germany's relative independence from Middle Eastern supplies. Consumers are advised to compare tariffs before the winter to secure savings.

Supported mono-actions list revealed.

Batiactu · source

My Prime Renovation has not entirely eliminated single-gesture aids, as some still persist amid increasing electrification and reforms. Despite changes, 84% of this topic remains unexplored, signaling further developments in housing aid. The content, however, is exclusively available to subscribers.

Insurance guarantees the owner.

Batiactu · source

Construction insurance, established by the Spinetta Law in 1978, requires contractors to take out a damage-contract for works that engage their liability. It aims to protect the solidity and safety of constructions by pre-financing repairs without waiting for judicial procedures. The guarantee, valid for ten years, follows the property and applies to various actors in the construction sector.

HLMs can sell Jeanbrun.

Batiactu · source

A decree of August 25, 2026 allows HLM organizations to sell homes to individual investors to rent them under the 'Relance Logement' fiscal regime. This device, established by the finance law of February 19, 2026, aims to relaunch residential investment by facilitating access to these homes. Now, HLM companies can sell part of the homes they produce, thus encouraging investor engagement.

New BTP-Immobilier funding levels.

Batiactu · source

As of September 1, 2026, new levels of support for apprenticeship contracts will be applied according to a decree. These levels concern several hundred training programs in the fields of real estate and construction. Batiactu has identified 107 specific training programs affected by these changes.

Bricomarché fined for pricing.

Batiactu · source

The Bricomarché store in Homécourt has been fined for failing to comply with regulations on price display. This penalty highlights the need for transparency for consumers. The decision emphasizes the importance of respecting commercial norms.

SMEs unprepared for e-invoicing.

Batiactu · source

Starting from September 1, 2026, all French companies will be required to be able to receive electronic invoices via state platforms. Large companies will also be required to issue their invoices in electronic format by this date, while small businesses will have until 2027. This reform aims to simplify invoice management and reduce VAT fraud, with estimated gains in the billions for the state and businesses.

Coastal strategy deemed insufficient.

Batiactu · source

The National Association of Coastal Elected Officials expresses its disappointment with the new national integrated coastal zone management strategy, adopted to combat coastal erosion. Although the strategy aims to better anticipate the impacts of climate change on coastal territories, the elected officials feel largely ignored. Of the 20,000 km of French coastline, 900 km are already in retreat.

Clarifying PAP and obstacles.

Technicbaie · source

The S61I commission clarified that the hold-down brakes are not subject to the NF S61-937-13 standard, which concerns the locking of exits. This avoids additional costs for conformity tests for PAP devices. The distinction between a brake and a lock is essential for equipment used in public places such as stations and airports.

New law hybridizes public partnerships.

Lemoniteur · source

The newly introduced law simplifies public contracts, enabling a hybrid public-private partnership model. This allows for the formation of dedicated public-private companies for executing public contracts, expanding opportunities for private sector involvement. However, certain regulations continue to apply, ensuring a balance between flexibility and accountability.

Medef meeting debates housing issues.

Lemoniteur · source

The debate between presidential candidates has extensively addressed the issue of housing, revealing frustration with the normative inflation affecting the sector. Gabriel Attal and Jean-Luc Mélenchon have expressed their concerns about the impact of regulation on construction. Proposals to simplify norms and relaunch construction abound, marking a central issue for the French economy.

Construction bureaucracy reduction uncertain.

Bauinfoconsult · source

The German government aims to reduce bureaucracy in the construction industry by 2030 to streamline processes and boost construction volume. However, manufacturers express skepticism about the effectiveness and pace of these initiatives, with most believing the timeline is unrealistic. Despite some optimism from larger corporations, a significant majority of industry players doubt the success of these reforms.

New GMoD energy rules.

Bauinfoconsult · source

The new Building Modernization Act GModG replaces the 65 percent rule, making new heaters no longer required to be 65 percent renewable. From 2029, fossil heaters will be gradually operated with climate-friendly fuels, while 100 percent renewable heaters will be aimed for by 2045. Additionally, tenants and landlords will in the future share the costs of new heaters equally.

Germany may miss climate goal.

Geb-info · source

Germany's greenhouse gas emissions fell by only 2% in the first half of 2026, insufficient to meet climate targets. The energy crisis has greatly affected industrial production and transportation. Experts warn that significant measures are needed to achieve the long-term emissions reduction goals.

GModG changes heater rules.

Geb-info · source

The GModG changes regulations for infrared heating in existing buildings, removing the previous 45% requirement for energy efficiency. The primary energy factor for grid electricity is lowered, enhancing the competitiveness of infrared heaters. Exceptions apply for buildings with two apartments or less, where specific standards do not apply.

VDI criticizes inconsistent policy.

Geb-info · source

The VDI criticizes the government's contradictory approach in promoting heat protection while simultaneously abolishing important building standards. This inconsistency raises concerns about legal uncertainties and potential lawsuits due to the lack of clear technical norms. The VDI emphasizes the necessity of a thorough review before removing any standard references to ensure safety and reliability.

FVH warns of wrong priorities.

Geb-info · source

The FVH criticizes the draft of the Natural Climate Action Program for failing to address key energy and climate realities adequately. They advocate for realistic adjustments to CO2 sink targets and emphasize the importance of sustainable wood usage in replacing fossil fuels. The organization calls for a broader discussion on achievable climate goals and effective measures.

Associations reject EU draft.

Geb-info · source

Fourteen associations from the construction and window industries have urged Germany to oppose new EU regulations on construction products. They argue that these guidelines will increase bureaucracy, raise construction costs, and negatively impact small and medium-sized enterprises. The groups are calling for a fundamental revision of these rules before they become binding.

Solar compensation rules change.

Geb-info · source

From 2027, the feed-in of electricity from private photovoltaic systems will be capped at 60%, while the compensation will be limited to a maximum of three years. Existing installations that are installed by the end of 2026 will receive grandfathering. However, unclear profitability and decreasing costs for solar panels make it difficult for private builders to decide.

Heat pumps may cause illness.

Haustec · source

The district court of Bielefeld dismissed a neighborhood lawsuit against the noise emissions of a heat pump, as the TA noise values are being met. The plaintiffs, an elderly couple, reported health complaints due to low-frequency humming sounds, however without significant impairment proven. The court found that the subjective sensitivities of the plaintiffs are not decisive for the assessment.

GModG changes heater rules.

Haustec · source

The new GModG regulations, effective since July 29, 2026, simplify requirements for existing buildings with infrared heating. Key changes include the elimination of the extra 45 percent energy-saving requirement, coupled with a reduction in the primary energy factor for grid electricity from 1.8 to 1.5, enhancing the competitiveness of infrared heating systems. Exemptions for buildings with up to two apartments occupied by the owner continue, allowing for greater flexibility in implementing direct electric heating.

Euractiv discusses construction subcontracting.

TheConstructionVoice · source

As the European Commission prepares to reform EU procurement rules, unions and employers are advocating for limits on subcontracting to enhance safety and accountability. They argue that excessive layers of subcontractors lead to unsafe working conditions and diluted responsibility. A proposed revision of public procurement rules presents an opportunity to establish more stringent regulations on subcontracting.

Spie builds Belgian battery parks.

Batiactu · source

French engineering group Spie is set to build two new battery parks in Belgium, aiming to boost energy storage capabilities in the region, reflecting the company's commitment to advancing sustainable energy solutions.

Saudi builds French theme parks.

Batiactu · source

Saudi Arabia plans to construct three theme parks in Cergy-Pontoise, France, with an investment of €6 billion. This project is led by Qiddiya Investment Company, aimed at blending entertainment, culture, and sports. It is expected to create 22,000 jobs and feature attractions linked to popular franchises like Dragon Ball Z.

Eiffage wins hospital contracts.

Batiactu · source

Eiffage Group will build two new hospitals, strengthening its position in the healthcare sector. This project demonstrates Eiffage's commitment to meeting the growing needs for medical infrastructure. The full details of this project are available to subscribers.

Wilmotte designs Insead's future.

Batiactu · source

The INSEAD business school in Fontainebleau, located 70 km south of Paris, inaugurated two new buildings on August 24, 2026. This development is part of a ten-year ambitious renovation and restructuring plan for their 56,000 m² campus, initiated to enhance future teaching and learning in management. Founded in 1967, INSEAD hosts 1,300 students annually and aims to shape its campus for future challenges.

Schoolyards are turning green.

Batiactu · source

Greening schoolyards in France is becoming common, with many renovation projects underway. A survey reveals that six out of ten municipalities have already resorted to greening in their schools. This

movement shows a growing trend towards creating green spaces in schools.

Javey increases door production.

Technicbaie · source

Javey has launched a new profiler dedicated to producing axes for its springless industrial sectional doors, enhancing production capacity. This investment, supported by France Nation Verte, aims to transform technical innovation into a sustainable industrial solution. The springless doors simplify installation and improve availability, marking a significant advancement in the industry's technology.

Professionals discuss school overheating.

Technicbaie · source

Professionals gathered in Poissy to address the overheating of school buildings during a heatwave. The conference showcased technical solutions for improving summer comfort and energy performance in educational institutions. Collaboration between the city and industry stakeholders highlighted the importance of solar protections and innovative renovation strategies.

Haguenau Hospital launches expansion.

Lemoniteur · source

The Haguenau Hospital, located in the Bas-Rhin, will launch a design-construction project worth 64 million euros in collaboration with Vinci Construction. This project includes a 9,000 m² extension to improve the connection and rationalize the organization of care between several buildings. The works will begin at the start of next year and should extend until the end of 2030.

Eiffage wins €132M contracts.

Lemoniteur · source

Eiffage Construction and Eiffage Energie Systèmes secured contracts worth €132 million for two hospital projects in France. They will work on the new medical-technical platform of CHU d’Angers and the future hospital center in Avallon. Both projects emphasize sustainable construction practices, with certifications for energy efficiency.

Securing Dax's Place des Salines.

Lemoniteur · source

The security works on the Salines Square in Dax, in the Landes, are continuing before a future renovation including a vegetated parking lot. The operation, started in October 2025, includes cleanings and drilling, with a planned filling for autumn 2027. The end of the work is expected by the end of 2027,

followed by six months of terrain monitoring.

New Heyden parking construction begins.

Lemoniteur · source

In Sélestat, the city of Bas-Rhin, a new parking facility is being built near the train station, with a completion date set for April 2027. The project, costing 5 million euros, will provide 373 new parking spaces across three levels, significantly increasing overall capacity. The design incorporates energy-efficient features, including a photovoltaic installation to reduce energy consumption.

New Strasbourg padel complex planned.

Lemoniteur · source

A Strasbourg project aims to convert two unused clay tennis courts into a covered padel complex, featuring four indoor courts and a club-house. The initiative includes social access for around 1,900 local students and support for youth integration programs. Estimated at €2 million, financing will involve regional aid and private contributions, with a city meeting anticipated by October 2026.

Renovating Clermont-Ferrand law school.

Lemoniteur · source

The Mitterrand building of the School of Law in Clermont-Ferrand is undergoing a significant rehabilitation expected to complete by April 2027. This project involves a total investment of 30 million euros, focusing on renovations and energy efficiency improvements. The facility will reopen in September 2027, providing enhanced spaces for students and an independent library entrance.

Restoring Saint-Germain Church.

Lemoniteur · source

The Delme commune in Moselle is preparing the restoration of the Saint-Germain church, with a target of collecting 10,000 euros by the end of 2027. The works, focused on the roof and coverings, will start in autumn 2026. This initiative aims to preserve local heritage while maintaining the current function of the building.

Renovating Guérande school energy systems.

Lemoniteur · source

The Bois Rochefort school group in Guérande, Loire-Atlantique is undergoing energy renovation set to start in summer 2025, focusing on geothermal energy installation. Thirteen deep boreholes will connect to a heat pump, significantly reducing energy costs and improving building accessibility. The project,

supported by multiple local organizations, is expected to be completed by the end of 2027.

Instability impacts European construction.

Bauinfoconsult · source

The geopolitical instability and rising energy prices are negatively influencing expectations in the European construction sector. Despite these challenges, the sector remains relatively resilient, with many projects being continued and order intake remaining stable. The outlook for 2027 shows an optimistic turn, as growth is expected in all markets.

Free construction whitepaper available.

Geb-info · source

The whitepaper on German construction trends from 2025 to 2040 provides insights for planning offices with three main theses: they serve as early indicators, anticipate peaks and lows in planning markets, and require their own warning signals to prepare for downturns. It emphasizes the stability of cyclical patterns over decades and highlights the need for strategic foresight. This document is free until September 13, 2026, and then available for a fee.

New building uses heat pumps.

Haustec · source

BauGrund Süd's new office building promotes sustainability with 400-meter deep ground probes and three brine/water heat pumps for heating and cooling. It also features a photovoltaic system, adhering to the KfW 40 energy efficiency standard. This facility will support 80 jobs and foster collaboration among various subsidiaries in geotechnical fields.

AGC innovates London's urban profile.

Interempresas · source

Paddington Square, a new mixed-use real estate project in London, features 18 stories with premium office spaces and vibrant retail areas. Designed by Renzo Piano, it boasts a sophisticated double-skin glass facade that maximizes natural light and energy efficiency. The building achieved BREEAM 'Excellent' certification, reinforcing its commitment to sustainability and modern architecture.

Prioritize building envelope rehabilitation.

Interempresas · source

Afelma advocates for the energy rehabilitation of hospitals and schools, emphasizing the importance of improving building envelopes to enhance energy efficiency and comfort. They argue that public

investment should focus on reducing energy demand rather than merely increasing air conditioning capacities. This approach will lead to long-term benefits including improved conditions for students and patients.

New cabins near Fontainebleau.

Batiactu · source

AW² has designed 30 wooden cabins in the Fontainebleau forest for Coucoo Cabanes, blending perfectly with the natural surroundings. The eco-friendly accommodations are set to be delivered in summer 2026, aiming for harmony with the environment. These cabins are part of a greater trend in architecture that emphasizes sustainable tourism.

Paris apartment improves energy rating.

Batiactu · source

This 81m² Haussmannian apartment in Paris has encountered energy class issues. Renovations are necessary to improve its energy efficiency. The article explores the challenges and potential solutions related to this property.

Permits fall, starts rise.

Batiactu · source

In July 2026, housing construction permits dropped by 2.5%, reaching a total of 29,577, continuing a downward trend following a prior spike. In contrast, the number of housing units started surged by 8.9%, totaling 27,677, primarily driven by collective housing. Despite these short-term improvements, long-term trends remain negative in both permits and construction starts.

Bouygues builds Thai tower.

Batiactu · source

Bouygues Construction is set to build a new luxury residential tower in Pattaya, Thailand, aiming to be one of the tallest in Southeast Asia. The project reflects a significant investment in luxury real estate, enhancing the skyline of the region. This development emphasizes Thailand's burgeoning property market.

Balance heritage, housing, and climate.

Technicbaie · source

The Minister of Housing advocates for balancing heritage protection and the urgent need for housing adaptations to combat climate change. He emphasizes empowering mayors and prefects to ensure

local projects aren't hindered by architectural approval alone. Ultimately, he calls for a living heritage that allows people to inhabit and thrive physically and culturally.

New building deficit identified.

Bauinfoconsult · source

A recent analysis by Jones Lang LaSalle (JLL) reveals a hidden construction deficit in Germany, highlighting that new housing is being built in areas with low demand. This misalignment exacerbates the shortage of available housing in urban centers. The study raises concerns about the focus on single-family homes instead of necessary multi-family units, suggesting a need for improved economic conditions to enhance housing supply.

Efficient multi-family house heating.

Haustec · source

A multi-family house in Weil im Schönbuch uses a heat pump and an eXergiemachine for efficient heat and hot water supply. Through innovative planning, high heat comfort is achieved at low heating costs. The installation includes a PV system to support the energy supply.

OPTEX launches self-assembling screens.

Wf-vision · source

The article reports on OPTEX's launch of a self-assembly exterior screen system that provides solar protection and privacy. This innovative system is designed for easy installation, enhancing comfort in residential areas. It allows users to effectively control solar heat and glare.

Access Control

5 articles

Malerba gathers technical professionals.

Technicbaie · source

Malerba hosted the first edition of Malerba[T], gathering over 120 building professionals to discuss technical door blocks and related issues. The event featured practical demonstrations and discussions on the importance of integrating motorization and access control early in project planning. Industry representatives showcased diverse solutions, emphasizing collaboration between manufacturers and users.

KIT develops hybrid roof system.

Geb-info · source

Researchers at KIT have developed a hybrid roof system that generates electricity, heat, and cooling simultaneously from a single surface by combining photovoltaics with passive daytime radiative cooling. The prototype can cool buildings while producing a measurable electrical output and harnessing solar energy. This innovative technology aims to transform roofs and facades into multifunctional energy surfaces for sustainable applications.

BZBGEAR at CEDIA Expo 2026.

Cepro · source

The page is unavailable, and users are redirected to various sections of the CE Pro website for assistance. There are links to recent news, projects, resources, and events related to the industry. Additionally, options for subscription and advertising are provided, along with general site navigation.

Luxury AV brands unite.

Air conditioning

4 articles

Cooling French schools is unfeasible.

Batiactu · source

Valérie Pécresse, the president of Île-de-France, announced that a large-scale air conditioning plan for regional high schools is not feasible. This decision comes as a response to ongoing calls for measures against repeated heatwaves. The article highlights the reasoning behind the conclusion that such extensive renovations are impractical.

Heat increases cooling power demand.

Geb-info · source

The summer heat increases the power demand for cooling significantly, which highlights the importance of photovoltaics for a stable power supply. The Solar Cluster Baden-Württemberg therefore demands that the future cooling demand be taken into account for photovoltaic systems. Battery storage can enable the use of solar power into the evening hours.

Retrofitting AC unit tips.

Geb-info · source

Tenants in Germany face challenges when retrofitting climate control systems, as often a landlord's approval is necessary. The installation requires structural changes that affect energy consumption and neighborhood interests. Changes to the law could make the process easier, but legal and practical hurdles need to be considered.

Mitsubishi presents sustainable cooling solutions.

Haustec · source

Mitsubishi Electric displays cutting-edge cooling and heating solutions at Chillventa 2026, emphasizing energy efficiency and eco-friendly refrigerants. Their products, including the award-winning MSZ-RZ wall unit, employ R290 and R32 refrigerants to meet contemporary climate requirements. The exhibition demonstrates their dedication to supporting sustainable building concepts across residential, commercial, and IT cooling applications.

Closures

10 articles

Shutter market struggles despite heat.

Batiactu · source

The article highlights the importance of closing windows during periods of high heat to prevent overheating of homes. It emphasizes the urgency of equipping homes without shutters to ensure thermal comfort. Despite this need, the market for shutters is struggling to take off.

Shutter market remains under pressure.

Technicbaie · source

The French market for shutters continues to decrease, falling below five million units by 2025 due to the housing crisis and a decline in renovations. Despite some positive signals for 2026, prudence remains in place with fragile growth forecasts. Renovation remains the main driver of the short-term market, even if improvements are expected from 2027.

Complete site management guide.

Technicbaie · source

The article explores the evolution of digitization in the carpentry and joinery sector, highlighting a shift from limited tool sets to integrated solutions covering all aspects of project management. With increasing pressure on profitability and regulatory requirements, businesses are seeking effective tools to improve their operations. Three distinct approaches - complete integration, specialization in estimating, and project performance - all aim to simplify the daily lives of professionals.

Optimize light and opening times.

Technicbaie · source

This article discusses the importance of opening and closing times for automatic doors and the impact of natural light on energy consumption in tertiary buildings. It highlights the need for rapid door operations to minimize energy loss and emphasizes the obligation to keep doors closed in heated or air-conditioned areas. Additionally, it addresses the optimization of natural lighting through innovative door designs, promoting better energy efficiency.

Custom shutters for heritage sites.

Technicbaie · source

The renovation of the shutters of a nursing home in Toulon required a careful adaptation to preserve the original aesthetic while integrating aluminum and functionality. The work, carried out on site, was orchestrated to minimize disturbances for residents. A technical challenge was overcome to ensure both respect for the patrimonial constraints and the improvement of sustainability.

Javey increases door production capacity.

Technicbaie · source

Javey has launched a new profiler dedicated to producing axes for its springless industrial sectional doors, enhancing production capacity. This investment, supported by France Nation Verte, aims to industrialize springless technology while ensuring high-quality custom manufacturing. The new setup increases the number of profilers to 15, facilitating the growth of this sustainable French manufacturing solution.

Baptiste Puthet joins StellaGroup.

Technicbaie · source

Baptiste Puthet has joined StellaGroup as the new Commercial Coordinator for the Window Closure Business Unit starting March 1, 2026. He replaces Pascal Cros, who will assist during the transition while maintaining his marketing responsibilities at SAT. This change aims to enhance strategic marketing efforts within the company.

AM60 Plus motors are functional.

Interempresas · source

A-OK Motors offers the AM60 Plus FSK Wifi tubular motor designed for large awnings, featuring an electronic end-stop and bi-directional Wi-Fi technology. It includes advanced climate sensors and a patented brake system for enhanced durability. The motor operates at 863.3 MHz frequency and is suitable for use in various weather conditions.

Choosing aluminum carpentry hardware.

Interempresas · source

Forcadell Accesoris stresses the importance of choosing high-quality hardware and accessories in aluminum carpentry, as they directly affect durability and customer satisfaction. The article discusses mechanical requirements, corrosion resistance, and energy efficiency for various opening systems. It concludes that professional-grade components are crucial for long-term success in the industry.

ISO-Bloco Hybratec sealing tapes.

Interempresas · source

ISO-Bloco Hybratec is a multifunctional sealing tape designed for passive houses and energy-efficient renovations, offering excellent air tightness and rain resistance. Its innovative hybrid technology ensures high functional reliability and energy savings, with a long-term capacity to absorb movement. Ideal for various applications, it complies with future EU building regulations.

Glazing

4 articles

Innaltech expands glass curtain range.

Interempresas · source

Innaltech has expanded its range of glass curtains for pergolas with two distinct opening systems. The Glasstech Slide and Glasstech Space systems enhance usability and design while providing protection against wind and rain. These solutions integrate seamlessly into outdoor environments, offering a minimalist aesthetic and customizable features.

Innaltech expands glass curtain options.

Interempresas · source

Innaltech has expanded its offering of glass curtains for pergolas with two innovative systems: Glasstech Slide and Glasstech Space. These systems enhance outdoor spaces by providing protection from the elements while maintaining light entry and visibility. Designed for residential and architectural projects, they feature minimalist aesthetics and customizable finishes.

Rehabilitation opens to landscape.

Interempresas · source

Technal played a key role in the transformation of the BAS residence in Mendexa, enhancing the relationship between interior spaces, natural light, and the surrounding landscape. The project incorporates large openings and a minimalist design to create a serene atmosphere, promoting continuity between living areas and outdoor terraces. This rehabilitation underscores the seamless integration of modern solutions with the original structure.

KS Schulten glass robots.

Interempresas · source

The KS Robot 320 is a professional crystal setter designed for installing heavy glass in confined spaces. Its articulation system allows for efficient movement, ensuring safety and precision during installation. Ideal for interior, facade, and hard-to-reach area work.

Heating

27 articles

Insulating pipes for heat.

Batiactu · source

Choosing the right insulation for pipes is crucial for energy performance and reducing operational costs. Key factors include thermal conductivity, surface emissivity, and fire behavior, which significantly impact insulation effectiveness. Options such as phenolic foam provide optimal thermal performance, while mineral wool and elastomeric solutions serve specific project needs.

BEG funding ends in 2026.

Geb-info · source

The support for the exchange of old heating systems with renewable energy systems will be strongly restricted from 2027 onwards. Owners who still submit an application in 2026 can use the current support conditions. This applies to pellet stoves, heat pumps and other heating systems, with timely application being crucial for the benefits.

Sun helps combat heat.

Geb-info · source

The article discusses how solar thermal energy solutions, developed by Soliterm Group, address the increasing demand for both heating and cooling due to rising temperatures in Germany. A case study from Turkey highlights the effectiveness of these systems in reducing energy consumption and CO■ emissions. It emphasizes the potential for such technology to transform energy supply in various sectors, supporting a sustainable energy transition.

Heat pumps replace air conditioning.

Geb-info · source

Heat pumps can both heat and actively or passively cool interior spaces, depending on the technology and heat exchangers. Active cooling is done by reversible heat pumps, while passive cooling is efficient and energy-saving with brine-water heat pumps. Early planning and suitable cooling surfaces are essential to achieve full cooling performance.

Cost drives heating purchases.

Geb-info · source

A recent Civey survey shows that nearly two-thirds of homeowners prioritize economic factors when buying new heating systems, focusing mainly on purchase, operational, and maintenance costs. Pellet heating owners consider future viability and the use of renewable energy sources more heavily in their decisions. However, funding for heating exchanges has decreased since summer 2026, affecting economic assessments.

Industry modernizes and cools.

Geb-info · source

The heating equipment industry is showing signs of recovery, driven by increasing demand for buildings, particularly for water-based systems that efficiently combine heating and cooling. Despite a 7% revenue decline in the first half of 2026, positive order signals suggest cautious optimism for modernization efforts. Improving energy efficiency and comfort in existing buildings is essential for adapting to future climate conditions.

Heat pumps will meet demand.

Geb-info · source

A recent study analyzed around 380 heating plans, showing that heat pumps and district heating will cover four-fifths of the heat demand by 2045 in Germany. Significant gaps remain in assumptions about renovations and biomass usage. The research emphasizes the need for transparent planning in the energy transition.

Heat pump sales rose 40%.

Geb-info · source

The sales of heat pumps in Germany rose by 40% to 195,000 units in the first half of 2026. This increase is driven by growing consumer awareness of fossil fuels and effective government incentives. Long-term plans to continue the BEG subsidy until 2030 strengthen investment confidence in the industry.

Warm water heat pump entry.

Haustec · source

The WWK-I 300 Plus from Stiebel Eltron is an excellent water heater heat pump and test winner at Stiftung Warentest, known for its high efficiency and low noise development. It allows homeowners to easily enter the heat pump technology, without having to immediately replace the existing heating system. The operation is simple via a rotary switch or comfortably via an app.

Proper heat pump planning guide.

Haustec · source

The article discusses the planning and implementation of heat pumps in residential and industrial settings based on VDI 4645 and VDI 4646 guidelines. It emphasizes the importance of a systematic approach that considers various factors such as energy sources, temperature levels, and operational efficiency. Both guidelines aim to enhance the effectiveness of heat pump systems by providing a structured planning framework.

Heat pump online training.

Haustec · source

The Hitzköpfe Academy offers online training courses on VDI guidelines 4645 and 4646, which focus on the planning and installation of heat pumps in residential and commercial buildings. The courses include practical content as well as preparatory videos to optimize the knowledge of the participants. These continuing education offers address skilled tradespeople and planners to meet the requirements of modern heat pump technology.

Cost drives heating purchases.

Haustec · source

A survey shows that when acquiring new heaters, economy and costs are decisive factors for homeowners. Especially owners of pellet heaters value the future sustainability of their heater. The decline in subsidies since 2026 also affects purchasing decisions.

Heating industry seeks cooling focus.

Haustec · source

The heating armature industry is experiencing a cautious recovery after a 7% drop in revenue during the first half of 2026, with incoming orders exceeding last year's figures by 9%. There is a focus on combined heating and cooling systems as the sector adapts to increasing temperatures. Industry leaders highlight significant potential for efficiency improvements in existing buildings using water-based systems.

Enpal, Bosch integrate smart thermostats.

Haustec · source

Enpal has integrated Bosch Smart Home thermostats into its portfolio, aiming to enhance energy efficiency for new heat pump customers since July 2026. This partnership further develops their energy system, optimizing heating performance through smart controls. Both companies strive to connect energy generation and usage, significantly reducing heating costs for users.

July 2026 energy price barometer.

Haustec · source

The article discusses the WP electricity/gas price barometer for July 2026, showcasing the electricity/gas price ratio for twelve locations in Germany. It highlights that prices for heating energy vary regionally due to network usage fees. The reference locations selected do not represent the full cost range across Germany.

Heat pump sales rose 40%.

Haustec · source

In the first half of 2026, the sale of heat pumps in Germany surged by 40%, reaching 195,000 units, signaling progress towards the government’s goal of 500,000 annual installations. This growth is attributed to increasing consumer awareness of fossil fuel risks and the success of government funding programs. The market outlook remains positive despite challenges like rising energy prices and costs related to fossil energy dependence.

Heat pump efficiency differences.

Haustec · source

A study of 25 air/water heat pumps using R290 refrigerant reveals significant variances in efficiency and technology metrics, with SCOP values ranging from 4.50 to 5.90. Key factors influencing performance include evaporator size and modulation capabilities. Optimizing efficiency necessitates detailed partial load data to enhance operational efficacy.

Oldenburg heat pump project report.

Haustec · source

In Oldenburg, a private developer aims to heat their buildings entirely with renewable energy by 2035. Collaborating with Weber & Reil GmbH, they started developing supply scenarios using nine air/water heat pumps. This initiative marks the beginning of a sustainable heating supply for several existing buildings.

Atec water hygiene storage.

Haustec · source

The Atec eTwin is a compact combined storage system for drinking and heating water, designed for single-family homes. It features a patented design that ensures hygiene standards while being compatible with various heating systems and offers efficient thermal separation. With an easy installation process and optimized for use with heat pumps, it minimizes standby heat losses and meets high efficiency requirements.

Heating wall implementation guide.

Haustec · source

In the final part of the series, Frank Hartmann discusses the completion and commissioning of a modernized heating system in a 1988 single-family home. Key components of the system were tested and operated before the owners were trained on its use. The article highlights the importance of thorough checks and instructions for ensuring optimal operation.

Heat pumps heat water.

Haustec · source

In multi-family houses, the heat pump technology for water heating requires precise planning to ensure a high temperature level throughout the year. Sustainable solutions are available for central and decentralized systems. Heat pumps play a key role in the path to a climate-neutral building stock.

Plate heat exchanger guide.

Haustec · source

Plate heat exchangers are efficient devices, but their performance can be impaired by incorrect design and poor water quality. This article explains important aspects of installation, operation, and maintenance to avoid common mistakes. A focused operation and consideration of specific requirements are crucial for performance.

Air-air heat pumps are efficient.

Haustec · source

Air-to-air heat pumps offer an efficient solution for heating and cooling in one system, as a practical example shows. After the renovation of a semi-detached house, energy costs decreased by about 40 percent. The importance of a comfortable room climate in the summer is often overlooked, but it is crucial for health and well-being.

Hybrid wood and pellet stove.

Haustec · source

The Multifire Archie by Palazzetti is an innovative hybrid stove that uses both wood and pellets for heat production and automatically switches between the two fuels. With a powerful design of up to 14 kW, it combines the benefits of both heating methods, including control via an app. It also offers a natural flame mode for use without electricity and meets the 2022 EcoDesign directive with an energy efficiency class of A+.

Brötje releases new data tools.

Haustec · source

Brötje has expanded its digital control platform with two new components: the IoT Gateway IWR DataConnect and the room device IWR IDA Basic, making it easy to operate and connect heating systems. The IWR DataConnect serves as the communication hub, linking heating generators directly to the cloud for user control via the Brötje Home Comfort App. Together, these devices provide homeowners with modern control functions and assist professionals during installation and maintenance.

New heat pump funding overview.

Haustec · source

Since July 2026, new funding conditions for heat pumps allow self-owners to receive grants of up to 80%. The funding rates will gradually decrease starting in 2027, making early planning crucial. Various bonuses based on income and the speed of replacing fossil heaters can further enhance the benefits.

German cities plan gas exit.

Haustec · source

In Germany, major cities are planning a shift away from natural gas in their heating strategies, focusing on climate-friendly alternatives. The analysis indicates that most cities have two primary supply routes: district heating in dense urban areas and decentralized solutions in less populated regions. Despite challenges and scepticism towards new energy legislations, many cities aim for climate neutrality ahead of national targets.

Sun Shading

12 articles

Strong pantograph awning arms.

Technicbaie · source

Eugène's Garage, located at the foot of Mont-Saint-Michel, chose the Socotex pantograph for its terrace, offering aesthetics and functionality in the face of climatic conditions. This innovative and resistant awning allows for year-round use and stands out for its crossbeam arm system, replacing traditional poles. Thanks to its design, the pantograph combines robustness and design, meeting the owner's aesthetic and functional requirements.

Dickson offers outdoor fabrics.

Technicbaie · source

Dickson offers a variety of outdoor fabrics designed for comfort and aesthetics, transforming spaces like gardens and terraces into stylish retreats. With over 200 color options, these fabrics provide effective sun protection and blend beautifully with different architectural styles. Their innovative designs enhance thermal comfort while allowing for creative personalization of outdoor areas.

Automating solar protections.

Technicbaie · source

Automating solar protections is essential to optimize the comfort and energy efficiency of office buildings, but its implementation often remains incomplete or poorly adapted. Regulatory requirements, although heavy, emphasize the importance of integrating these systems from the outset of building project design. Good management and maintenance of the automation are crucial to maximize their potential and meet user expectations.

Tellier uses wood sunshades.

Technicbaie · source

Tellier Brise-Soleil has launched Wood’Ligne, its first wooden shading louvre range, developed with the École supérieure du bois. This shift aims to combine the durability and aesthetics of wood alongside their existing aluminum products. The new collection features seven carefully selected wood types tailored to architectural needs.

Solar protection prevents overheating.

Technicbaie · source

The article discusses the role of brise-soleil in addressing building overheating and enhancing visual comfort, highlighting their increasing importance due to regulatory changes. It presents findings from MSI Reports on the French market, noting a slight decline in new constructions but a projected moderate growth by 2026. Additionally, it emphasizes the benefits of brise-soleil, particularly in regulating natural light and reducing air conditioning reliance amid climate challenges.

Custom urban terrace shading.

Technicbaie · source

A custom motorized awning system was implemented on a 350 m² terrace in Colomiers to provide shading, waterproofing, and thermal comfort. The project features curved architecture and integrates LED lighting, enhancing the aesthetic while maximizing outdoor space usability. Additionally, the system employs advanced technology for individual control and protection against rain and wind.

Learning under BSO shade.

Technicbaie · source

The educational hub of Hautes Feuilles, built in Lantenne-Vertière, uses adjustable solar shades from Schenker Stores to regulate temperature while optimizing natural light. This building, designed by architect Pierre-Jean Ravoux, showcases local materials and a sustainability philosophy. Teachers can order individual solar protections, ensuring student comfort.

Somfy shades gain Matter support.

Cepro · source

The page you were looking for does not exist, but you can explore various links for latest topics, project resources, and events related to CE Pro. The site also offers subscriptions to newsletters and information about awards. If you need assistance, the search tool is available to help you navigate.

Trivantage announces Sunbrella collection.

Wf-vision · source

Trivantage has launched the Sunbrella Fusion Collection, which includes 144 unique fabrics designed for durability and style. The collection aims to support creative designers and will be showcased at various industry events this fall. This new collection highlights innovation in fabric design.

Denvelops, Eurecat win Gold Award.

Interempresas · source

Denvelops and Eurecat have won the Delta de Oro award for their innovative urban pergola designed to generate seasonal shade. This solution features dynamic textures and movements, enhancing urban spaces while reducing wind loads. The project represents a successful integration of engineering and aesthetics, aimed at addressing climate change challenges.

KE's vision for Lago Maggiore.

Interempresas · source

The Camping Eden, located on Lake Maggiore, presents its new Kedry Prime bioclimatic pergola, designed to blend contemporary comfort with natural beauty. This versatile space, created in collaboration with KE Contract and Pizzini dal Molin Architetti, reinforces hospitality and improves the dining area. The installation guarantees protection against variable weather, integrating technology and architectural design.

Bioclimatic pergolas gain prominence.

Interempresas · source

Bioclimatic pergolas are emerging as essential elements in contemporary architecture, providing energy efficiency and better outdoor environments. These structures regulate solar radiation and improve the comfort of intermediate spaces in buildings. Grupo Ayuso has developed advanced solutions that integrate technology to automatically adapt to climatic conditions.

Ventilation

2 articles

Multifunctional thermoelectric heat pump.

Haustec · source

A team from FH Aachen has developed a thermoelectric exhaust air heat pump that integrates heating, cooling, and ventilation into a compact system. This technology aims to provide energy-efficient solutions for modular buildings, significantly reducing greenhouse gas emissions. The heat pump uses thermoelectric elements to enhance efficiency and allows for a space-saving installation, ideal for various applications.

Bioclimatic pergolas gain popularity.

Interempresas · source

Bioclimatic pergolas are gaining prominence in current architecture, becoming key elements for energy efficiency and well-being. Their integral design allows for regulating solar radiation and optimizing ventilation, improving comfort in outdoor spaces. Grupo Ayuso has developed the Vértika pergola, which automatically adapts to climatic conditions, achieving efficient use of the environment.
