2027 Deals Are Already Being Decided. Are You In the Room?

WindowVision · source

Successful B2B marketing for 2027 begins in late 2026, as buyers research and shortlist potential vendors. Visibility during Q3 and Q4 is crucial for building trust and relationships before decisions are finalized. Companies not engaging early risk being overlooked when budgets are allocated.

Akena strengthens its growth in Spain with a new agency in Badalona

Protección Solar · source

Akena, a French firm specialized in outdoor solutions, is expanding in Spain with a new showroom in Badalona, enhancing direct customer interaction. This strategic step aligns with their growth plan, introducing verandas and high-quality products previously well-established in France. The company aims to increase brand recognition and improve collaboration with both distributors and end consumers.

Interempresas reinforces its commitment to the industry as a media partner of Forum amec

Protección Solar · source

Interempresas strengthens its commitment to the industry by acting as a media partner for the Forum amec, a key event for international industrial companies. This collaboration facilitates visibility for critical discussions on growth strategies and industry trends. The event fosters knowledge sharing among business leaders and emphasizes the importance of unity in achieving success.

Self-locking blinds Percoter Permosqui PS-49 (microperforated)

Protección Solar · source

Percoter, S.L. offers the Permosqui PS-49 security blinds, made from durable aluminum with a unique self-locking feature. These blinds provide high security for both new installations and replacements, with adjustable light and ventilation options. They are customizable in various finishes and come with motorization options for convenience.

Spaces to enjoy the outdoors for longer

Protección Solar · source

Bandalux offers solar protection solutions designed to enhance outdoor living spaces, making them more comfortable and connected to nature year-round. Their products, including various types of awnings and curtains, allow homeowners to enjoy light and shade while maintaining an open feel. These innovations aim to integrate the interior and exterior of homes, promoting a modern way of living.

Idemo Motors Soltex 45 awning motors

Protección Solar · source

Idemo Motors offers an electronic motor for awnings with integrated radio and electronic limit switches. The product features high protection against water and supports various automation systems. It comes in different specifications to suit various needs.

Panoramic mobile ceilings Tecnikor TKM

Protección Solar · source

Tecnikor's TKM mobile glass roof offers a unique design that eliminates horizontal profiles, enhancing aesthetics and functionality. It can integrate seamlessly with existing glass curtain systems, ensuring safety and ease of installation. The product includes various certifications based on European standards, guaranteeing durability and reliability.

Free Webinar to Address Electrical Safety & Compliance in the Window Covering Industry

WindowVision · source

A free 60-minute webinar titled "Powering Safety" will address electrical safety and compliance in the window covering industry on October 13, 2026. Experts will discuss key safety standards related to motorization, battery power, and wireless technology. Attendees will learn how to navigate compliance, identify certified products, and understand potential risks.

Motionblinds Integrates With Homey Smart Home Platform

WindowVision · source

Motionblinds has integrated with the Homey smart home platform, enabling its motorized window coverings to connect with over 850,000 users worldwide. This integration allows for seamless control and automation alongside various smart home devices. With options for voice control and multiple connection methods, this partnership enhances the smart home experience.

Nominations Open for Window Fashion VISION’s 2026 40 Under 40

WindowVision · source

Window Fashion VISION is accepting nominations for its 2026 40 Under 40 Awards, aimed at recognizing outstanding professionals aged 18-39 in the window covering industry. The awards celebrate rising leaders who contribute significantly to the industry's advancement through their innovation and accomplishments. Nominations are open until September 30, 2026, inviting colleagues and peers to highlight deserving candidates.

Behr Gets Grounded With Its 2027 Color of the Year

WindowVision · source

Behr has announced its 2027 Color of the Year, named Grounded, which is an earthy olive green inspired by nature. This versatile shade aims to create warm, restorative interiors that connect to the natural world. To celebrate its 10th anniversary, Behr is donating $250,000 to Habitat for Humanity.

Free Webinar to Address Electrical Safety & Compliance in the Window Covering Industry

https://www.wf-vision.com/webinars/free-webinar-to-address-electrical-safety-compliance-in

The "Powering Safety" panel will bring industry experts together to discuss electrical, battery and wireless safety requirements.

As motorization, battery power and connected technology continue to expand across the window covering industry, understanding the safety and compliance requirements behind these products is increasingly important for manufacturers, dealers, fabricators, and installers.

Window Fashion VISION will present "Powering Safety: What You Need to Know About Electrical Safety & Compliance," a free, 60-minute webinar on Tuesday, October 13 at 1:00 p.m. ET. The live panel discussion will bring together industry experts to explore the electrical, battery, and wireless safety standards that apply to today’s window covering products and components, including motors, controls, remotes, batteries, charging systems, sensors, and cables.

The discussion will use the industry white paper "The Importance of Electrical, Battery and Wireless Safety Certifications for the Window Covering Industry" as a resource, translating complex requirements into practical information professionals can use when manufacturing, selling, specifying, and installing window covering products.

Attendees will learn:

- Key electrical, battery and wireless safety requirements.

- Risks and potential liabilities associated with uncertified products.

- How to identify certified products and components.

- Questions to ask suppliers about certification and compliance.

- What manufacturers, dealers and installers should know before products reach the customer.

Electrical safety considerations extend throughout the product chain, from manufacturing and sourcing to transportation, installation, and use. The webinar is designed to give window covering professionals

a clearer understanding of their role in navigating compliance and reducing potential risk.

"Powering Safety: What You Need to Know About Electrical Safety & Compliance" is free to attend, but advance registration is required.

BONUS RESOURCE: Attendees will also receive access to the free industry white paper, "The Importance of Electrical, Battery and Wireless Safety Certifications for the Window Covering Industry," which will serve as a resource for the panel discussion.

2027 Deals Are Already Being Decided. Are You In the Room?

https://www.wf-vision.com/advertising-and-marketing-tips/2027-deals-are-already-being-deci

2027 Deals Are Already Being Decided. Are You In the Room?

Your buyers aren't waiting until January to start deciding. Neither should you.

Here's a truth the most successful B2B marketers know: the deals that close in Q1 and Q2 of 2027 aren't going to be won in 2027. They're going to be won right now — in the second half of 2026 — when buyers are quietly doing their research, building their shortlists, and forming opinions about which products, services and technologies they will purchase and renew.

If you're not showing up in that window, you're not in-the-running.

Research shows that 80% of B2B buyers complete approximately 70% of their purchasing journey before they ever contact a vendor. The decision is largely made before the conversation even starts.

The Buyer Journey Starts Earlier Than You Think

B2B buyers are savvy and evaluate new partnerships carefully. They research, compare, talk to colleagues, and more. They consume content 3 to 6 months before they fill out a contact form or respond to an email. The companies these buyers read about, notice and are exposed to, are the ones that start to build trust with and are the companies that will have a seat at the table when budget is finally signed off.

The companies that wait until 2027 to start reaching and building a relationship with their target audience? They will find out they entered a race where the other runners already have a six-month head start.

2027 Budgets Are Being Built Today

Your buyers are in active planning mode right now. Q3 and Q4 are when organizations budget and allocate resources for the year ahead. They are making decisions about priorities, partners, vendors, and spend while you're reading this.

Being visible during that planning season isn't just smart. It's table stakes.

Decision-makers need to see your message consistently over time. Think about any relationship. It's built via a series of interactions over time. Marketing to your prospects is no different. Familiarity doesn't happen overnight — it compounds, and it pays off exactly when buyers are ready to act.

This Doesn't Replace 2027 Marketing Investment. It Amplifies It.

Advertising in Q3 and Q4 2026 to drive sales in 2027 now is like compound interest. The awareness you build today earns trust over time, so that by the time your buyers are ready to decide — whether that's February or May or June — you're not starting from zero. You're cashing in on the familiarity and relationship you've been building for months.

Marketers that advertise consistently through the second half of 2026 enter the new year as a known quantity, not a new face. In B2B, where relationships and reputation drive decisions, that distinction can be the difference between landing on the shortlist and securing new sales in 2027 or being overlooked entirely.

Your 2027 marketing plan deserves a strong foundation. The time to build it is now.

The Question Isn't Whether to Invest — It's Whether You Can Afford to Wait

Every moment you're not visible to your buyers is a moment a competitor might be. Sitting out the research phase isn't cost savings — it's a missed opportunity with a price tag you won't see until it's too late.

The window is still open. Q3 and Q4 are the most powerful times to reach buyers who are actively evaluating options, and position yourself to win in the year ahead.

Your buyers are planning for 2027 investments. Are you?

The Grace Awards Accepting 2027 Submissions

https://www.wf-vision.com/grace-awards/the-grace-awards-accepting-2027-submissions/

The Grace Awards, the premier competition celebrating innovation and artistry in custom window treatments, is now open for entries for the 2027 program. This distinguished competition honors designers and artisans who exemplify creativity, craftsmanship and vision, those who transform windows into works of art.

Now in its 2027 edition, the Grace Awards continue to recognize the industry's most inspiring projects, offering entrants a prestigious platform to showcase their mastery and elevate their professional presence. With 24 diverse categories, participants are invited to submit their finest work across both Design and Artisan divisions, highlighting the depth of talent and innovation within the window covering industry.

Entrants may submit projects through November 29, 2026, at Grace-Awards.com, where they can also explore full category descriptions, judging details and entry guidelines.

Design Categories Include:

- Curtains & Draperies
- Top Treatments
- Combination
- Finishing Touch – Decorative Hardware & Trim
- Soft Shades
- Specialty (Arches, Odd Shapes, etc.)
- Whole-Room Integration
- Motorization
- Outdoor Living & Exterior Solutions
- Commercial
- Luxury
- Emerging Designer Award

Artisan Categories Include:

- Curtains & Draperies
- Top Treatments
- Combination
- Ingenious Installation
- Bedding & Pillows
- Specialty (Arches, Odd Shapes, etc.)
- Upholstery
- Most Intricate Handwork
- Outdoor Living Craftsmanship
- Soft Shades

- Finishing Touch – Decorative Hardware & Trim

- Emerging Artisan Award

A distinguished panel of industry experts will independently and anonymously evaluate all submissions from December 7-31, 2026, ensuring that each project is reviewed with fairness, rigor and respect for craftsmanship and innovation. The 2027 Grace Awards will culminate in an elegant awards gala held during the International Window Coverings Expo (IWCE) in Tampa, Florida. This highly anticipated celebration will honor the industry's top visionaries and announce the category winners, shining a spotlight on excellence, artistry and collaboration in window fashion.

Designers and artisans are encouraged to enter now and join the legacy of talent, creativity and inspiration that defines the Grace Awards. For more information or to submit your project, visit Grace-Awards.com.

Motionblinds Integrates With Homey Smart Home Platform

https://www.wf-vision.com/smart-home/motionblinds-integrates-with-homey-smart-home-platfor

Motionblinds, the smart shading brand from Coulisse, has integrated with Homey, allowing its motorized blinds, shades and curtains to connect with the smart home platform's more than 850,000 users worldwide.

Developed by Dutch company Athom, part of LG Electronics, Homey brings connected devices together in a single app. Motionblinds window coverings can now be controlled and automated alongside lighting, climate, security and other smart home products.

The integration supports the full range of Motionblinds motors through three connection options: Matter over Thread, Matter over Wi-Fi and a local API. Once connected, Motionblinds motors can be incorporated into Homey Flows and automated based on factors such as time, temperature and presence. Voice control is also available through Siri, Google Assistant and Amazon Alexa.

"Homey users already have their home working for them — lights that respond to presence, heating that adjusts automatically. With Motionblinds, their window coverings finally join that story. We're proud to bring professional-grade motorized shading into one of the most versatile smart home platforms out there — a powerful position for smart home users and every dealer in our global network alike," said Roy Ebbekink, partner marketing specialist at Motionblinds.

"The best smart home experiences happen when great products work better together. Motionblinds has built an impressive portfolio of smart window coverings for every home and every installation, and we're excited that every Motionblinds motor now integrates seamlessly with Homey. It's another step towards giving our users the freedom to choose the products they love without compromise," said Abe Haverkamp, head of partnerships at Homey.

The Motionblinds app is available in the Homey App Store, with additional information about the integration available at Motionblinds.com.

IFDA Educational Foundation Announces 2026 Grant Winners

https://www.wf-vision.com/industry-news/ifda-educational-foundation-announces-2026-grant-w

IFDA Educational Foundation Announces 2026 Grant Winners

The Educational Foundation of the International Furnishings and Design Association (IFDA) has announced its 2026 grant recipients, awarding $38,500 to support professional development, research and educational initiatives across the design industry.

This year’s funded projects span universal design, historic preservation, color and lighting education, healthcare design and professional development.

“We’re honored to support the inspiring range of projects through this year’s grants,” said Karen Dzendolet, chairman of the board of the Educational Foundation of IFDA. “All the initiatives demonstrate considerable talent and skill and a willingness to take on new challenges.”

The 2026 grant recipients are:

- Irma Dobkin Universal Design Grant ($2,000): Soheil Jafari, PhD student in design and merchandising at Oklahoma State University

- Ina Mae Kaplan Historic Preservation Grant ($2,000): Lisa M. Tucker, PhD, professor at Virginia Tech and director of the Center for Historic Preservation in the School of Design

- Elizabeth Brown Grant to Interior Design Programs ($2,500): Nam-Kyu Park, chair of the Department of Interior Design at the University of Florida

- Tony Torrice Professional Development Grant ($1,500): Hamed Yekita, PhD, assistant professor of interior design at Iowa State University

- Valerie Moran Memorial Grant (up to $3,000): Jennifer Driscoll, founder of Broadview Marketing and Broadview Tours

“The selection process is challenging with such talented applicants,” said Earline Feldman, FIFDA, director of scholarships and grants. “Each recipient stood out for their vision, dedication and potential to make a meaningful contribution to the field; we are delighted to recognize their achievements.”

IFDA Educational Foundation grants are available to professionals working in interior design and furnishings-related fields. The foundation also provides scholarships for undergraduate and graduate students and funding to support IFDA chapter programming.

Behr Gets Grounded With Its 2027 Color of the Year

https://www.wf-vision.com/design-and-trends/behr-gets-grounded-with-its-2027-color-of-the-

Behr has named Grounded (T27-01), an earthy olive green inspired by nature, its 2027 Color of the Year.

Blending moss and olive tones with subtle brown undertones, Grounded taps into the continued desire for interiors that feel warm, restorative and connected to the natural world. The versatile shade is designed to bring a sense of calm to a space while still offering enough depth to make an impact.

“Grounded is a reminder that the most meaningful spaces are the ones that help us connect with the rhythms of everyday life,” said Kayla Kratz, head of color at Behr Paint Company. “The shade’s organic warmth creates a sense of calm and renewal, making every room feel inviting and effortlessly livable.”

Grounded anchors Behr’s 2027 Color Trends Palette, a collection inspired by the beauty and balance of the natural world. The palette spans warm neutrals, earthy tones, muted pinks, clay hues and airy blues, offering plenty of opportunities for layering color throughout the home.

The collection also brings seven Behr legacy colors back into the mix: Coastal Beige, Wheat Grass, Environmental, Denim Light, Smokey Claret, Sarsaparilla and Mozart. Each was selected to complement Grounded and help create cohesive, nature-inspired palettes.

The selection comes as homeowners increasingly look to their interiors as a place to retreat and recharge. According to research conducted by Behr, 86% of Americans say home DIY and design projects help them feel grounded by allowing them to create a safe, comforting haven, while 84% say the right paint color is critical to making a space feel like home.

This year's announcement also marks the 10th anniversary of Behr's Color of the Year program, which has evolved over the past decade alongside changing attitudes toward color, design and the role the home plays in everyday life.

To commemorate the milestone, Behr is donating $250,000 to Habitat for Humanity to support affordable homeownership programs and help families create comfortable, stable homes.

Grounded and the complete Behr 2027 Color Trends Palette are available in Behr Dynasty, Behr Marquee, Behr Ultra and Behr Premium Plus paints through The Home Depot.

Asefave organizes a webinar on the digitalization of control documents, waybill, and eCMR

https://www.interempresas.net/CC/LMXrbvW0oXO9mGCEGZ99Z1cP3ZI.html

Asefave will organize a webinar on the digitalization of the control document, bill of lading, and eCMR on September 23. The webinar will address the digital transformation of documentation related to road transport and the new requirements companies will face with the upcoming mandatory digital format for the Control Document (DeCA) which will take effect on October 5, 2026. The session will run from 12 to 1 PM, online.

During the session, the main regulatory updates will be analyzed, including the differences between the Control Document, the Bill of Lading, the CMR, and the eCMR, as well as the technical and legal requirements needed to ensure their proper use.

The session will be conducted by Docuten, who will practically explain how to approach this transition and what solutions exist for the secure and traceable digitalization of these documents in compliance with regulations.

Additionally, aspects such as electronic signatures, document access during inspections, document storage and traceability, as well as integration with current management systems and the evolution towards the European eFTI model will be discussed.

This is an opportunity to learn firsthand how to prepare for this new regulatory scenario and how to turn the digitalization of transport documentation into a tool to improve the efficiency and operations of companies.

Interested participants can register for the webinar. A link will be sent to registered individuals the day before the event.

Akena strengthens its growth in Spain with a new agency in Badalona

https://www.interempresas.net/CC/kIhl9UYEIKjLcLMESGL9w8LC36M.html

CURRENT NEWS

The company will open new showrooms in Madrid and Málaga in the coming months.

Akena strengthens its growth in Spain with a new agency in Badalona.

The French company Akena, specialized in verandas, pergolas, and premium solutions for outdoor spaces, has inaugurated a new showroom in Badalona (Barcelona), a strategic step in its expansion

plan in the Iberian Peninsula. The new agency will bring the brand closer to the end customer and strengthen both commercial activity and collaboration with professionals in the sector.

Akena continues to consolidate its presence in Spain with this new agency, an exhibition space from which the company intends to showcase its wide range of solutions for outdoor space conditioning and enhance the visibility of a brand with a long history in France, where it has over 45 years of experience.

The inauguration marks a new milestone in the company's growth strategy in the Spanish market. As Tristan Savary, coordinator of Akena's Commercial Network in Spain, explained, the company has begun to transfer to the Iberian market a commercial model that has been successfully functioning in France for decades, based on a proprietary network of agencies, personalized advice, and in-house installation teams. “We want the customer to know the Akena brand and not just the distributor,” he noted.

Until a few years ago, the company worked in Spain exclusively through distributors. However, the experience gained in the market led the company to also bet on direct sales to individual customers to increase its visibility. Thus, in recent months, Akena has incorporated salespeople in Barcelona, Madrid, Málaga, and Valencia, a structure that will continue to grow with the opening of new showrooms.

The choice of Badalona is not casual. Savary explained that the company was looking for a well-connected location, easily accessible from Barcelona, and with enough space to house a permanent exhibition of its products. Additionally, the location, in a commercial area specialized in home and garden equipment, allows the company to approach the type of customer to whom it is directed.

The veranda is the axis of the growth strategy.

Akena's offer is divided into two main families of solutions: extending the home through verandas and products intended for enjoying the outdoors, among which stand out bioclimatic pergolas, retractable canvas pergolas, mobile roofs, carports, or pool houses.

Although bioclimatic pergolas currently represent one of the most in-demand products in the Spanish market, the company wants to strongly introduce the concept of veranda, which is well established in France but still little known in our country. For Savary, there is a fundamental difference between the two systems: “The veranda is not just a simple closure; it is a true extension of the home, designed to be used year-round, thanks to its waterproofing qualities and thermal and acoustic performance.”

To achieve this, Akena bets on construction with thermal break in all its aluminum profiles, double and triple glazing, and various solar protection solutions that allow maintaining comfort both in summer and winter.

"We started 45 years ago manufacturing only verandas, and it remains the product we want to develop in Spain," Savary stated, confident that the Spanish market offers significant potential for these types of solutions as awareness grows among architects, installers, and end users.

Own manufacturing and high-end solutions.

One of Akena's main differentiating elements is that it controls the entire process, from design and manufacturing to final installation. All products are manufactured entirely in France and arrive ready to facilitate assembly, reducing installation times and minimizing potential incidents.

“We take the measurements, manufacture each project to measure, and our own teams carry out the installation,” explained Savary. This model allows for high-quality control and offering completely customized solutions.

The company also opts for a clearly premium positioning. Its pergolas include concealed screws, screens fully integrated into the structure, direct and indirect LED lighting, wide customization possibilities, and large dimensions without the need for intermediate pillars.

Among the most innovative solutions is the smart glass Sage Glass, exclusive to Akena, capable of progressively changing its opacity level to reduce up to 98% sunlight radiation and incident heat, improving comfort without sacrificing natural light entry.

The showroom as a commercial tool.

The new agency in Badalona will not only function as a sales point but also as a space where customers can physically see the products before making a decision. After a first technical visit to the home, Akena invites customers to the showroom to review the project, visualize dimensions, finishes, and equipment, and resolve any doubts before formalizing the order.

According to Savary, this process allows “the user to better understand the final result and appreciate the various customization possibilities that each solution offers.”

The new space will also serve as a training center for the company’s sales team, facilitating knowledge of the different product ranges and sharing experiences among salespeople from different areas.

New steps in Spain.

After the opening in Badalona, Akena plans to inaugurate new showrooms in Madrid and Málaga as part of its expansion plan in Spain. At the same time, the company will continue to strengthen its collaboration with distributors and professionals, especially in those areas where the proximity model continues to be the most appropriate.

The group’s growth strategy also contemplates the gradual incorporation of new solutions and brands from its portfolio into the Spanish market, aiming to expand its offer and meet the different needs of the outdoor and home extension market.

Self-locking blinds Percoter Permosqui PS-49 (microperforated)

https://www.interempresas.net/CC/n0eCrrC7pbo8AEKyAP_NEbMJW5Q.html

Percoter Permosqui PS-49 (microperforated)

Self-locking blinds: indicated for installations both in new constructions and replacements, allowing for a very high level of security.

Safety blind with a self-locking profile, extruded in aluminum alloy 6063 treatment T5.

Overall thickness between 1.10 mm and 1.30 mm.

Partial opening possible through a microperforated profile, achieving a reduction in solar light incidence and an estimated ventilation surface of 12.56 dm2/m2.

Its performance can be improved by installing Idemo brand motors with intermediate stop, allowing the blind to be positioned as desired with a push.

It is indicated for installations both in new constructions and replacements, allowing for a very high level of security.

It can be supplied in any market finish, anodized, Ral Color Chart, Futura Collection, etc.

Properties

- Approximate weight: 7.85 kg/m2.

- Maximum width: 2.75 m.

- Maximum height: 3.00 m.

- Lamella size in lock position: 47 mm.

- Lamella size extended: 72 mm.

Request more information.

The openings of buildings play a key role in the energy transition

https://www.interempresas.net/CC/Yb.mphlLXhuwT46sQ4LPInn3ppU.html

The maximum potential of windows is achieved when combined with exterior solar protection systems and intelligent control systems.

The openings of buildings play a key role in the energy transition.

The manufacture of windows and solar protection systems becomes an essential element for climate regulation. The next edition of R+T 2027 will present, in this regard, interconnected solutions.

The increase in temperatures and the modification of the EU Directive on the Energy Performance of Buildings (EPBD) are transforming the requirements that constructions must meet. In addition to reducing the energy demand for heating, protection against heat during the summer months is becoming increasingly important.

In this context, coordination between windows, external solar protection systems, and home automation is fundamental. R+T, the world's leading trade fair specializing in blinds, doors/gates, and solar protection systems, which will take place from February 15 to 19, 2027, in Stuttgart, will show how these components can be integrated to create energy-efficient systems ready to face future climate conditions.

For many years, energy policy applied to buildings has focused primarily on reducing heating heat losses. However, the increase in heatwaves is making summer heat protection increasingly important. Buildings with a high level of insulation need effective strategies to limit heat ingress and reduce the energy required for cooling.

The 'Ladder of Cooling', developed by the European Solar Shading Organisation (ES-SO), offers a guide to address the challenges. It describes a clear sequence: first, passive measures should be

applied, such as vegetation, shading, and exterior solar protection systems, to prevent heat ingress. Only after that should natural ventilation systems, such as automated night cooling, be implemented. Active cooling systems should only be used once these possibilities are exhausted.

"With the Ladder of Cooling, we aim to provide policymakers, designers, and construction industry professionals with a practical tool that enshrines summer thermal protection as a fundamental element of sustainable buildings. The fact that ES-SO has been a technical and professional support entity for R+T since 2026 reflects our commitment to promoting these issues at the European level and continuing to foster knowledge exchange between industry, research, and the political realm," states Anders Hall, president of ES-SO.

Effective protection against heat during the summer does not depend on individual products, but on the interaction between different components of the building opening. Windows allow regulating the entry of natural light, ventilation, and solar energy capture. However, their potential is maximized when combined with exterior solar protection systems and intelligent control systems.

Exterior shading systems prevent solar radiation from penetrating the building through glazing. Dynamic systems adapt to weather conditions and the time of year: in summer, they limit heat ingress and reduce the need for cooling, while in winter, they allow selective use of solar radiation, thus decreasing heating consumption. For this reason, windows and solar protection systems should be considered together from the earliest planning phases.

This same comprehensive vision is present in the sector initiative 'Level Up – Windows for Innovative Minds', driven by Somfy. This proposal advocates that windows, solar protection systems, and motorization and automation technologies be planned as a single system. This way, both energy efficiency and home comfort can be improved, as well as profitability, while creating new opportunities for companies specialized in consulting and project development.

The interconnected systems mark the evolution of the sector. Requirements related to energy efficiency, adaptation to climate change, and user comfort are significantly transforming civil engineering and building technology. Increasingly, manufacturers are developing their solutions as coordinated systems that intelligently integrate windows, solar protection systems, actuation technology, automation, and facade solutions. In this way, the building opening takes on a central role as a functional unit.

Home automation plays a fundamental role in this regard. Smart home technologies connect windows, blinds, exterior adjustable slats, screen awnings, and ventilation and control systems to form an intelligent integrated system. Sensors record solar radiation, wind, outdoor temperature, and indoor climate conditions, information that is complemented by weather forecasts. Based on this data, the building can react automatically and prevent overheating or excessive cooling even before it occurs.

This advancement opens new market opportunities for window manufacturers, solar protection companies, the planning sector, and electrical installations. Developers and investors increasingly demand integrated solutions rather than standalone products. Companies that expand their consultancy offerings in solar protection systems, home automation, and smart home technologies can generate greater added value, strengthen their relationship with clients, and, through interdisciplinary planning from the earliest phases, reduce connection points and potential assembly errors. Furthermore, support programs aimed at external solar protection systems provide an additional boost to energy renovations.

R+T 2027 also reflects this evolution. Together with its technical and conceptual sponsors, exhibiting companies, and partners of its wide-ranging event program, it shows how interconnected solutions can be developed to achieve more energy-efficient buildings and prepared for climate change. The focus is on intelligent actuation technology, adaptive solar protection systems, automated control systems, and integrated window and facade concepts. In this context, what matters is not just the performance of each component, but the correct interaction between all of them.

"The future of building envelopes is not in isolated products, but in the intelligent interaction among all sectors. Only through early collaboration between window manufacturing, solar protection systems, automation, facade technology, and planning will it be possible to develop solutions capable of meeting the growing demands for energy efficiency, adaptation to climate change, and home comfort," affirms Sandra Musculus, president of IVRSA and ITRS. Precisely this integrated approach is what R+T 2027 enables firsthand, making the event a meeting point for innovation, knowledge transfer, and exchange among professionals.

Idemo Motors Soltex 45 awning motors

https://www.interempresas.net/CC/Ycgtaq7RcXb8St_tmjTT8SxGso8.html

Idemo Motors, S.L. - Motors for Awnings

Idemo Motors Soltex 45

Motors for awnings: with integrated radio

Electronic motor with integrated radio of 45 mm diameter for awnings, especially for chest types.

Features:

Electronic limit switches, with integrated radio.

Allows adjustment in chest awnings of the closing limit by pressure, with automatic tension readjustment every 20 cycles.

With universal star-shaped head, made of metal in motors above 30Nm.

IP64 insulation level with sealing rubber for high protection against water ingress.

IDRM protocol: grants compatibility with the entire range of automation and sensors.

Advantages:

Complete regulation from the control point. Allows changing the rotation direction after closing the programming. Allows readjustment of the limit switches. Perfect for integration into the Idehome Neo home automation system.

Technical Characteristics:

45-30/17

Motor torque: 30 Nm

Speed: 17 rpm

Power/ consumption: 200W / 0.89 A

Power supply: AC 230V / 50Hz

Radio frequency: 433.92 MHZ

Encoding: Idemo idrm

Memory capacity (number of transmitters): 20

Protection index: IP64

Thermal insulation: class H (up to 180º)

Operating temperature: -20ºC to + 65ºC

Total length: 564 mm

45-50/12

Motor torque: 50 Nm

Speed: 12 rpm

Power/ consumption: 250W / 1.2 A

Power supply: AC 230V / 50Hz

Radio frequency: 433.92 MHZ

Encoding: Idemo idrm

Memory capacity (number of transmitters): 20

Protection index: IP64

Thermal insulation: class H (up to 180º)

Operating temperature: -20ºC to + 65ºC

Total length: 574 mm

Interempresas reinforces its commitment to the industry as a media partner of Forum amec

https://www.interempresas.net/CC/Tev3xuqW31C23o91husPpOMlxDY.html

Interempresas strengthens its commitment to the industry as media partner of the Forum amec

The Forum amec has consolidated itself as one of the main meeting points for industrial companies with an international vocation, bringing together executives, experts, and business leaders to share knowledge, experiences, and growth strategies in an increasingly demanding global environment.

As a media partner of the event, Interempresas has been accompanying this reference meeting for the industry for a couple of years, contributing to highlighting the main debates, trends, and success stories presented during the day.

Interempresas conducted comprehensive coverage of the event, with interviews with the main protagonists of the Forum amec 2026.

In this short video, Aleix Torné, executive director of Interempresas, explains the relationship that unites Interempresas and amec, as well as the value of a collaboration built on a shared vision of support for the industry and for business internationalization.

He also details the role played by the editorial group as a media partner of the Forum amec and the importance of bringing to the sector the content, reflections, and experiences that arise in such meetings.

The executive states that this collaboration has always been carried out "always thinking in favor of companies, which are the ones who will benefit from these initiatives." He concludes by saying that "going alone goes faster, but walking together makes things better and goes further."

Panoramic mobile ceilings Tecnikor TKM

https://www.interempresas.net/CC/KZd85JbfxBMllHxZRpZ7o1x88mU.html

Tecnikor TKM

Panoramic mobile roofs: certified according to European standards.

The TKM mobile roof from Tecnikor is the only glass mobile roof on the market that eliminates horizontal framing to achieve a clean design, creating unique spaces that perfectly combine with existing glass curtain systems in the market, extending the concept of frameless enclosures to the mobile roof.

For Tecnikor, it was important to design a product that was easy to install and safe for the installer, hence the roof is mounted from below, eliminating the need to open and close guides while balancing. Its system minimizes risks and incidents, and there will be no need to return to the installation to resolve sealing problems with the glass.

Technical specifications:

The TKM mobile roof is compatible with all glass curtain and solar protection systems on the market without the need for adaptations. The crossbeam is designed to be compatible with any brand of glass curtain and can be integrated within the structure without drilling.

The TKM mobile roof operates on bearings, unlike other brands that operate by sliding on mats; the mats in the guides have been eliminated and placed in the panels, avoiding common problems in sliding systems.

Thanks to the homogeneous and modern design of Tecnikor mobile roofs, the screws and motors are hidden behind extrusion caps. By eliminating the horizontal framing, water flows unobstructed to the gutter, being channeled for subsequent drainage.

The TKM mobile roof has integrated lighting in the structure without the need to add any additional profile, maintaining the line and performance of the system.

Specific tests of mobile roofs have been conducted in certified laboratories, where certification is based on European standards. This certification ensures that by choosing Tecnikor products, one acquires a quality product with all guarantees:

- Wind load resistance test according to UNE-EN 12211:2000 "Windows and doors. Wind load resistance."

- Water tightness test according to UNE-EN 1027:2000 "Windows and doors. Water tightness."

Operation:

- Manual: through a pole, since the roof operates on bearings, the manual option is simple and easy to use, utilizing a retainer at the back to prevent the panels from sliding.

- Motorized: double pull motorization to avoid torsions in the panel and tensions in drive belts, increasing durability and reducing noise. The motor is concealed in the cover with a beautiful extrusion

cap to avoid unsightly additions like folded sheets; this cap also helps mitigate the sound of the motor. With the possibility of smart sensors.

Maximum width between streets:

- Laminated safety glass 4+4 = 1,300 mm.

- 16 mm chamber glass = 1,300 mm.

- 16 mm polycarbonate = 1,500 mm.

- 16 mm sandwich panel = 1,500 mm.
