New interior glass platform.

https://www.glaswelt.de/glas/flachglas-markenkreis-neue-online-plattform-fuer-interieur-glaeser

The new online platform raumglas.de of the Flat Glass MarkenKreis offers comprehensive knowledge about the use of glass in interior spaces. Users find creative inspirations, technical guidelines and a digital pattern collection for interior glass. The platform combines practical information and aesthetic aspects for interior architects and planners.

Safety glass planning.

https://www.glaswelt.de/glas/bf-merkblatt-019-2015-glasbemessung-aktualisiert-mehr-sicherheit-fuer-die-planung-von-glaesern

The German Association of Flat Glass has updated its guideline BF Merkblatt 019/2015 for glass design, focusing on practical applications under the latest DIN 18008 standards. The revised document clarifies normative requirements and provides practical tips to enhance safety and efficiency in glass applications. This initiative aims to offer engineers and planners a reliable resource in anticipation of the forthcoming Eurocode for glass.

Forel revolutionized glass processing.

https://www.glaswelt.de/glas/titelstory-wie-forel-die-glasbearbeitung-revolutionierte

The article celebrates Forel's 50-year journey in revolutionizing glass processing, starting from a small workshop in Treviso, Italy. It highlights the family's innovative approach, including the shift to vertical glass processing, which led to patented solutions in insulation glass manufacturing. Additionally, it discusses Forel's expansion into Germany and their development of advanced insulation glass lines.

Circulation of wood refers to the process by which trees and other woody plants transport water, nutrients, and sugars throughout their bodies.

https://www.glaswelt.de/fenster/remmers-von-der-frontale-zirkulationsholz-einfach-erklaert

The article discusses how old scaffolding boards are transformed into sustainable circulation wood for future window manufacturing. It highlights Remmers' innovative Eco-coating system that utilizes renewable resources. This approach promotes resource-efficient coatings and aligns with environmental standards for future tenders.

Magnets make windows slide easily.

https://www.glaswelt.de/top-thema/schwebende-schiebeelemente-von-d-lev-magnetmodule-lassen-mammut-fenster-muehelos-gleiten

The magnetic levitation technology of d-lev enables the effortless movement of push elements weighing up to 1.5 tons with minimal pulling force. This system operates without motorization and frictional components, making it low-maintenance. Developed in collaboration with Ironlev, it is optimized for delicate profile systems to support modern architectural solutions.

Fenzi ensures full compliance.

https://www.glaswelt.de/glas/wie-fenzi-lueckenlose-regelkonformitaet-gewaehrleistet

The Fenzi Group ensures conformity to the new CAM requirements for insulated glass with tested formulations and comprehensive traceability. The regulations demand transparency in material selection and the avoidance of critical substances such as SVHC to guarantee safety and quality. Their commitment to sustainable solutions is underscored by clear documentation and adherence to environmental and health standards.

Acrylic Glass Company's translucent architectural surfaces.

https://www.glaswelt.de/glas/agc-transluzente-flaechen-fuer-architektur-und-innenausbau

AGC's Matelux glass combines high light transmission with effective privacy, expanding its application from traditional interiors to translucent facades. Its unique texture allows architects creative freedom in designing spaces that are bright yet shielded from outside view. The glass is versatile and can be treated for various architectural needs while maintaining durability and aesthetic appeal.

Transparent work environments for Schaeffler.

https://www.glaswelt.de/glas/transparente-feco-arbeitswelten-fuer-die-schaeffler-ag

The Schaeffler AG has developed a transparent interior concept for its new project and technology center in Bühl, featuring flexible system glass walls over 15,000 m². This design fosters communication, sustainability, and acoustic quality with areas for meetings, labs, and workshops. Incorporating wood and glass, the architecture promotes an open, adaptable work environment that meets modern mobility challenges.

Frerichs adds new decorative glasses.

https://www.glaswelt.de/glas/frerichs-glas-44-neue-ornament-und-dekorglaeser-im-programm

Frerichs Glas expands its design collection with 44 new ornamental and decorative glasses, offering diverse options for architects and designers. The collection features various patterns and surface finishes, enhancing both aesthetics and functionality in modern spaces. Comprehensive support is provided from planning to execution, ensuring tailored solutions for individual projects.

corporate

Schüco consolidates Iberian plastics.

https://www.glaswelt.de/fenster/schueco-buendelt-kunststoffgeschaeft-iberischer-tochtergesellschaft

Schüco has established a new subsidiary, Schüco Polymer Iberia S.L., to enhance its presence in the Iberian markets of Spain and Portugal starting May 1, 2026. This move aims to strengthen partnerships and service offerings in the region, supported by a new logistics hub in Valdemoro. The initiative underscores Schüco's commitment to developing premium system solutions and improving logistical performance.

Marcel Philipp joins GU BKS.

https://www.glaswelt.de/fenster/sicherheitsexperte-marcel-philipp-verstaerkt-gu-bks-service-als-projektleiter

Marcel Philipp has been appointed as the new project manager for GU BKS Service GmbH, bringing over ten years of experience in critical infrastructure and security systems. He will oversee project management and lead the project teams to enhance operational efficiency. Philipp's expertise includes security-critical applications and regulatory requirements related to critical infrastructures.

Thiery leads Swisspacer marketing.

https://www.glaswelt.de/glas/julien-thiery-leitet-jetzt-marketing-sales-bei-swisspacer

Julien Thiery will assume the role of Marketing & Sales Director at Swisspacer starting May 1, 2026, succeeding Sarah Sattler. With extensive experience from the Saint-Gobain Group, he aims to enhance customer proximity, innovation, and market strategy. CEO Matthias Bach expresses confidence in Thiery's ability to drive Swisspacer's strategic development further.

Window

Aktuelle deutsche Fenstermarktdaten.

https://www.glaswelt.de/fenster/vff-bf-fachtagung-zu-statistik-und-markt-die-aktuellen-fenstermarkzahlen-fuer-deutschland

The recent conference on market statistics in Frankfurt highlighted the resilience of the window industry in Germany, predicting a growth of 1.9% to 3.1% for windows and 1.8% to 2.9% for exterior doors in 2026. Despite geopolitical uncertainties and a backlog in housing supply, experts emphasize the necessity of stable investment conditions. The conference underscored the importance of addressing housing shortages and adapting to evolving market demands.

Kneer uses modified wood.

https://www.glaswelt.de/fenster/wartungsarm-und-wetterbestaendig-kneer-suedfenster-setzt-auf-modifiziertes-holz

Kneer-Südfenster utilizes modified wood in its Duo-Kantel construction for enhanced durability and reduced maintenance. The combination of weather-resistant Accoya wood outside and natural pine inside significantly prolongs surface longevity. This innovative approach meets modern demands for energy efficiency, stability, and design flexibility.

Internorm wins Austrian market test.

https://www.glaswelt.de/fenster/markttest-fenster-oesterreich-internorm-sichert-sich-gesamtsieg-vor-velux-und-josko

Internorm has once again emerged as the overall winner of the Market Quality Award, showcasing its brand strength and future readiness with a remarkable 88% purchase willingness among consumers. This marks the fifth consecutive year that Internorm leads in the window category, significantly ahead of competitors Velux and Josko. The research underscores Internorm's commitment to quality, innovation, and customer satisfaction in the window industry.

Amphibian: Lean, large, low-CO2.

https://www.glaswelt.de/fenster/salamander-auf-der-frontale-schlanke-fenster-grosse-formate-weniger-co2

Salamander presents innovative window solutions at the Fensterbau Frontale, focusing on slim designs and large formats while improving CO2 balance. Co-CEO Till Schmiedeknecht discusses new approaches in modern window construction, emphasizing material efficiency and unique designs like the Greta-Dinkel window. Their offerings target both historical and contemporary architectural needs, showcasing large elements up to 2.8m tall.

Innovations in new windows and doors.

https://www.glaswelt.de/fenster/maco-im-frontale-gespraech-diese-innovationen-bewegen-den-fenster-und-tuerenmarkt

During the Fensterbau Frontale, MACO showcased innovations such as Smart-Home sensors and a new floor-to-window sill designed for modern window construction. The company emphasizes customer dialogue to develop solutions addressing future challenges. Their latest products aim to enhance smart connectivity and offer practical solutions for window manufacturers.

Window rethinks construction.

https://www.glaswelt.de/fenster/frontale-video-von-ventana-wenn-fensterbau-anders-gedacht-wird

In a video from the Frontale trade fair, Ventana Managing Director Stefan Schwanekamp presents innovative approaches in window construction with curved elements and large-scale sliding sashes. The discussion covers technical support and the company's European partnership in the window speciality. A summary of the new possibilities and products for the window industry is given.

Optimize Windows with Accessories.

https://www.glaswelt.de/fenster/fenstertuning-mit-fensterfalzluefter-dichtung-und-insektenschutz

The GW theme day for window tuning presented innovative solutions for improving ventilation, seals, and insect protection. Experts showed how window manufacturers can increase living comfort and energy efficiency. A final discussion highlighted the practice and challenges in the window industry.

Siegenia's smart handle improves.

https://www.glaswelt.de/fenster/siegenias-smarter-fenstergriff-wird-noch-intelligenter

Siegenia has launched the second generation of its smart window handle, which now features Matter compatibility for seamless integration with various smart home systems such as Apple Home and Google Home. This new version boasts improved mechanical design and monitoring capabilities, allowing users to control their windows digitally via an app. Enhanced security and energy efficiency are also key benefits, as it connects with other smart devices to optimize home comfort.

Saltzer develops secure openings.

https://www.glaswelt.de/fenster/saelzer-entwickelt-fenster-und-tueren-fuer-neue-bedrohungslagen

Sälzer has developed new window and door systems tailored to combat vandalism, adhering to the newly introduced ift guideline EI-06/1. This guideline establishes standards for vandalism resistance, differentiating it from traditional burglary attempts. Sälzer's solutions emphasize robust designs while integrating existing safety requirements.

Sun Shading

Emphasizing specialized literature.

https://www.glaswelt.de/sonnenschutz/fachliteratur-im-fokus

The article discusses two complementary technical books: "Professionell Dübel setzen für Dummies" focuses on practical know-how for fastening techniques on construction sites, while "Befestigung und Abdichtung von Fenstern und Türen" delves into planning and building physics. Both books provide essential guidance for professionals in the window and solar shading industries, highlighting their relevance for both practical application and adherence to regulations. Collectively, they bridge the gap between practical implementation and theoretical understanding critical for modern construction challenges.

Water parade!

https://www.glaswelt.de/sonnenschutz/warema-setzt-auf-umfangreiche-pruefungen-fuer-schneelast-und-regen-wasser-marsch

Warema prioritizes comprehensive testing for snow loads and rainfall to ensure robust outdoor solutions. Their rigorous approach exceeds standard requirements, simulating real weather conditions during assessments. This commitment to quality results in safe and reliable structures that provide long-lasting outdoor living spaces.

Meets all comfort demands.

https://www.glaswelt.de/sonnenschutz/design-und-funktionalitaet-mit-ke-loesungen-allen-komfortanspruechen-gerecht

The article discusses the renovation of the La Quercetta estate, emphasizing the integration of KE solutions to harmonize functionality and aesthetics in outdoor spaces. It highlights four distinct products used to enhance guest experiences, including the Kedry Prime bioclimatic pergola and Qubica Light shading system. The renovations aim to create sophisticated environments that blend luxury with the natural surroundings.

Meet Europe's top door maker.

https://www.glaswelt.de/haustueren/aluminium-haustueren-treffen-sie-europas-groessten-hersteller-von-aluminium-haustueren

Inotherm is a leading Slovenian manufacturer of aluminum front doors, known for quality and innovative design. Celebrating 35 years, the company produces over 44,000 doors annually and emphasizes energy efficiency and security. With a customized approach to design, Inotherm caters to diverse architectural needs while expanding its product range.

The door and the leaf are attracted to each other.

https://www.glaswelt.de/fenster/deceuninck-kooperiert-mit-frager-wenn-sich-tuerfuellung-und-fluegel-magisch-anziehen

Deceuninck introduces a new door concept utilizing Frager's patented Magnetude technology, which eliminates the need for adhesives and minimizes installation issues. The innovative design allows for easy on-site assembly and a wide selection of over 500 customizable panel designs. This advancement reduces production time and material complexity, enhancing overall efficiency in door manufacturing.
